| DAO 2000-81 | | | |
|---|--|----------|--|
| DAO 2000-81 Part 7 Rule 25 Section 5 a# 1 Part 7 Rule 25 Section 5 a# 2 | Person in charge of the plant / equipment has sufficient measure to ensure that no dark smoke is discharging from any stack in the establishment. E.g.: window view of stack, mirror to reflect top of stack, smoke density indicator, CCTV, etc. All oil-burning equipment have heaters capable of heating oil to a temperature appropriate for the oil | ✓ | |
| Part 7 Rule 25 Section 5 a# | Establishment is fossil fuel-fired power plant over 10MW rating installed with CEMS for particulates, sulfur oxide, and NOx | ✓ | |
| | Establishment is petroleum refinery / petrochemical industry installed with CEMS for particulates, sulfur oxide, and NOx | ✓ | |
| | Establishment is primary copper smelter installed with CEMS for particulates, sulfur oxide, and NOx | ✓ | |
| | Establishment is steel plant installed with CEMS for particulates and sulfur oxide | ✓ | |
| | Establishment is ferro-alloy production facility installed with CEMS for particulates | ✓ | |
| | Establishment is cement plant installed with CEMS for particulates | ✓ | |
| Part 7 Rule 25 Section 5 b | Miscellaneous equipment like reheating furnace, smoke oven, bake oven, coffee heaters, varnish kettles, etc. are installed with pollution control facilities | ✓ | |
| Part 7 Rule 25 Section 13 a | Establishment has precautionary controls for dusts generated during vehicular movement, transportation of materials, construction, etc. (List controls identified) | ✓ | |
| Part 7 Rule 25 Section 13 b | Establishment has precautionary controls for volatile organic compounds or organic solvent emissions generated during storing, pumping, handling, processing, etc. (Listcontrols identified) | ✓ | |
| Part 7 Rule 25 Section 13 d | No open burning activity in the establishment | ✓ | |

| Stainthy Gert sets with cape. greater than or equal to 1,250 KW undergo annual emission testing (with 3 test runs). These gen sets should not have the potential to emit more than 100tons/year of regulated poliutant. MC 2007-003 (2) Boiler rated at greater than or equal to 251HP undergo bi-annual emission testing (with 3 test runs) Other sources that have potential to emit equal to or greater than 100tons/year of regulated poliutant undergo bi-annual emission testing (with 3 test runs) Boiler rated between 100 to 250 HP undergo annual emission testing (with 3 test runs) Diesel generator rated at 600 to 1,243KW undergo annual testing (with 3 test runs) Diesel generator rated at 600 to 1,243KW undergo annual testing (with 3 test runs) Other sources that have potential to emit greater than 30 but less than 100tons/year of regulated poliutant undergo annual emission testing (with 3 test runs) Sources of emissions of hazardous air poliutants included in PCL (DAO 1998-38) undergo bi-annual emission testing (with 3 test runs) Emission sources of petrochemical works undergo bi-annual emission testing (with 3 test runs) Emission sources of smelters undergo bi-annual emission testing (with 3 test runs) Emission sources of cement klins undergo bi-annual emission testing with 3 test runs) Emission sources of cement klins undergo bi-annual emission testing with 3 test runs) Emission sources of fero-alloymants undergo bi-annual emission testing with 3 test runs) | EMB Memorandum Circ | | √ | |

Other Observations:

The establishment has fairly handled the air pollution management program as prescribed under the permit conditions. The proponent need not to renew the Permit ti Operate since the generator capacity of 5 kW is no longer within the threshold level to secure such permit.

Remarks and Recommendation:

Constant monitoring shall be sustained in order to ensure environmental and public health safety. No reported untoward incident on air pollution problems encountered/reported for the current reporting period.
